

ARIA Resort & Casino at CityCenter Las Vegas

Creating a luxurious and personalized room experience for every guest with Control4® Suite Systems.

Easy Control

Using one simple remote, you can easily set the systems in the room to your personal preferences, including:

- Lighting levels
- Room temperature
- Television/video systems
- Music
- Wake-up scenes
- Drapes
- Service requests

Energy Savings

CityCenter's in-room technology offers an unobtrusive and easy way to conserve precious resources such as energy and water. Control4® Suite Systems can be programmed to automatically shut down a room when it is unoccupied, turning down or off the heating/cooling system, televisions, lights and any appliances.

The wireless nature of the Control4® system nearly eliminates the need for costly conduit and wiring in traditional construction—saving money in construction costs and helping the environment by consuming fewer construction materials.

Control4® Solutions

The best part is that you can enjoy this five-star guest experience in your home. Control4 provides affordable smart home technology that allows you to enjoy the same personalized home automation and easy energy management options at home, every day.

Visit Control4 at www.control4.com.

Rest Easy

Each room features a "good night" button next to the bed that turns off the lights, TV and/or music; closes the drapes; and turns on the privacy notification for the room.

Always Wake Up On the Right Side of the Bed

Select a "wake-up" scene where lights and music gradually come on, the temperature comes up, and the drapes open for a more soothing wake-up experience.

A Warm Welcome

Open the door, and the lights will gradually come on, the drapes will open to spectacular views of the city or mountains, and the TV will turn on to display a list of automated controls.

High Tech Connections

One gigabit of fiber bandwidth in each guest room delivers unrivaled Wi-Fi connectivity with both the Internet and hotel operations.

Guests Go Green

Green settings on the Control4 system also allow guests to voluntarily "green their stay," selecting their preferences for light level, room temperature and the frequency of linen changes.

That's Entertainment

Each room has a 42-inch LCD HDTV, that can be connected to laptops, game consoles, cameras and MP3 players. You can control virtually anything in the room using the Control4® on-screen interface.
